

Budget Information System

Client Background: Company deals with providing solutions to budget offices to get collaborative information from different sources at one single place and analyze data to generate consolidated reports.

Background/ Business Drivers: The software is currently being used by many government offices across US. Some of these include budget offices of:

- ≠ City of Concord, NC
- ≠ Highlands County, NC
- ≠ Kansas City, MO
- ≠ City of Sarasota, FL

smartData Solution: Using the Budget Information System (BIS) all budget data is consolidated in a single location for intuitive data and workflow management. By reducing the amount of time spent tracking errors, analysing data or creating scenarios the budget officials can focus on the important things. When the budget is completed and the final budget is ready to be created the system generates GFOA (Government Finance Officers Association) Distinguished Budget Presentation Award winning documents.

The system allows consolidating all budgeting information in once place rather than keeping track of information across numerous disparate sources. Some of the key features of the software include:

- ≠ Financial/Payroll System Integration
- ≠ Cost Center Budgeting
- ≠ Line Item Budgeting
- ≠ CIP Budgeting
- ≠ Personnel/Benefits Budgeting
- ≠ Administrative Tables
- ≠ Budget Scenario Modelling
- ≠ Performance Measures
- ≠ Reporting
- ≠ Security
