

## Supplier Risk and Performance Management

**Client Background:** Global Communication and Collaboration Platform Development and automation of verification and compliance management process across the Supply Chain for World's leading Brands, Retailers, Toy Manufacturers and Food Suppliers.

### **Background/ Business Drivers:**

This application is developed as a Global collaborative Commerce Network platform that enables Businesses to interact and share business critical information with their trading partners in a web based environment, where trading partners – Retailers, Manufacturers, Distributors, and Suppliers – are fueled by current, accurate and actionable information.

While the Businesses grow, Industries needs greater Visibility and Access to their business partners to keep things running smoothly. As more and more participate in the Supply chain, there is an increase in the need for documents and information. This brings with it an increase in effort, greater potential for errors and higher overhead for everyone involved. The challenge was how to manage the growing needs with limited budgets and resources. How to ensure that the documents and information used to conduct business will be handled correctly, quickly and efficiently. And how to empower Buyers so that they can have a transparent view of Supplier's quality and compliance documentation and certification.

**smartData Solution:** Our solution has been successfully able to overcome the above challenge and deliver much more.

- We have developed collaborative commerce web platform that helps Businesses and their trading partners throughout the supply chain share and manage validated information with trading partners.
- It provides an affordable solution for managing Product Recalls, Product specifications, Corrective Actions, Validate Certifications, Test results and much more. This application tracks movement of products and services from point of origin to point of consumption.
- The platform facilitates the immediate exchange of validated information between trading partners— reducing workload and increasing reach and efficiency within the supply chain.
- It provides business intelligence and search tools to identify problems, manage exceptions, and resolves issues quickly and allows suppliers to securely share certificates and data with all their trading partners, thereby helping reduce

- redundant certifications and costs throughout the supply chain.
- The result there are over 70,000 facilities utilize the platform including seven of the top ten retailers and 82 of the top 100 food companies.
